

MyVeloFit Launches Native iOS App for Smarter, Simpler Bike Fit Experience

Helping cyclists maximize comfort and performance—anytime, anywhere, from their iPhone.

Ottawa, ON – [Fall 2025] – MyVeloFit, the world's most advanced AI-powered bike fitting platform, today announced the upcoming launch of its dedicated iOS app. Built to streamline the digital fitting experience for cyclists, the new app brings the power of MyVeloFit's fit technology directly into the iOS mobile-first environment—featuring seamless video capture and upload, personalized fit assessments, and Apple-native convenience like Apple Account Sign-Up and Apple Pay.

The new app answers a growing need among cyclists for a smoother, more accessible way to customize their fit and adjust their bike setup. The native iOS app will make it easier to try the product, complete sessions and make bike changes to match customer fit and performance goals.

With the iOS app, riders can now complete fit, mobility, and sizing assessments in just minutes—backed by higher-quality video capture and guided workflows tailored for mobile. Cyclists can manage subscriptions, receive fit reminders, and pay securely with Apple Pay, all within a fluid app experience. Over time, MyVeloFit will continue to expand platform functionality, including future language support and integrations with tools like HealthKit and its B2B provider services.

"We've seen firsthand how important it is to meet our riders where they are—on their phones, in the moment, ready to take action. The MyVeloFit app is designed to simplify the process of achieving a great fit, while setting the stage for even more personalized cycling experiences ahead," said Justin Goulding, COO of MyVeloFit.

"Using the MyVeloFit iOS app, it was fast, smooth, and actually kind of fun. I got my fit results, made some changes and hit the road the same day. " said a beta user based in California.

The MyVeloFit iOS app will be available for free download on the App Store at launch. Cyclists can complete a bike fit within minutes using just their iPhone. For more information or to get started, visit www.myvelofit.com/app (placeholder for App Store pre-launch or waitlist link).

About MyVeloFit

MyVeloFit is the world's most advanced AI-driven online bike fitting platform, helping cyclists optimize their riding position, improve comfort, and prevent injuries—all from the convenience of their home.

Customer FAQ – MyVeloFit iOS App

Q: What is the MyVeloFit iOS app?

A: The MyVeloFit iOS app is a native mobile app that allows cyclists to complete fit and mobility assessments directly from their iPhone. It simplifies the fit process of improving bike fit by offering higher-quality video capture, personalized guidance, and seamless integration with Apple tools like Apple Pay and Sign In with Apple.

Q: How is this different from using MyVeloFit on the website?

A: The iOS app is designed specifically for mobile use, with native camera access for smoother video recording and uploads. The experience is faster, more reliable, and optimized for handheld devices—eliminating many of the pain points users have experienced on mobile browsers.

Q: What features are available at launch?

A: At launch, the app will support Fit and Mobility uploads and assessments. Riders can also manage their subscription, update their profile, receive fit reminders, and make secure purchases using Apple Pay. Future updates will include additional language support and new feature rollouts.

Q: Is Expert Review included in the app?

A: Not at initial launch. However, Expert Review may be added in a future release as we continue to expand the app's capabilities.

Q: Do I need an existing MyVeloFit account to use the app?

A: No. You can create a new account directly in the app using your email or Apple Sign In. Existing MyVeloFit users can also log in and access their profile and fit history.

Q: Is the app free to download?

A: Yes! The app is free to download from the App Store. Some features—like full fit reports or upgrades—may require a subscription or one-time purchase.

Q: What devices are supported?

A: The app is designed for iPhones running iOS 16 or later. iPads are not officially supported at this time.

Q: Can I access my past fit data from the web in the app?

A: Yes. Your account and fit history are synced across devices, so any previous fits completed via the website will be visible in the app once you log in.

 Internal FAQ – MyVeloFit iOS App**Q: What functionality is included at launch?**

A: The initial release includes Fit, Mobility assessments, along with account creation, payment via Apple Pay, subscription management, localized onboarding (EN/FR/ES), and push notifications. Expert Review and referral tracking are not included at launch.

Q: Will the iOS app offer feature parity with the website?

A: No. While it supports core fit features, certain advanced tools and support content are web-only for now. The app will expand over time based on usage data and roadmap priorities.

Q: How is the native camera integration different from web video capture?

A: The iOS app leverages direct access to the iPhone's camera API for higher-resolution, smoother, and more reliable video recording. This is expected to significantly reduce upload failure rates and improve fit analysis quality.

Q: Is the app ready for HealthKit or wearable integrations?

A: Not at launch. However, backend discovery work has been completed. HealthKit integration is planned for a future release, pending additional scoping and privacy review.

Q: How is localization handled?

A: The app will launch with support for English, French, and Spanish. Additional languages (German, Portuguese) are planned post-launch and will be added based on regional growth and demand.

Q: How will this app impact our B2B strategy?

A: The iOS app lays foundational groundwork for future integration with our B2B platform. This may include tools for providers to deliver customer-facing fit and performance services directly through the app.

Q: What happens if a user encounters an issue in the app?

A: Support flows will follow existing protocols. Users will be directed to web-based help resources or can contact support via the in-app link. Internal QA and user feedback from TestFlight will guide bug prioritization pre-launch.

Q: What's the rollout plan post-TestFlight?

A: A soft launch will target our B2C email base and selected affiliates. App Store metadata and creative assets will be optimized prior to public launch. Analytics will monitor install rate, engagement, conversion, and crash/error data in the first 30–60 days.
